

# Baby Leaf

## MARKETING

The baby leaf is grown on Grade 1 silt soils on the Norfolk Coast

We grow spinach, wild rocket & red chard

## DRILLING

We start drilling in March & continue until early September

Baby leaf crops take ~ 22 – 26 days to grow in the summer

## COOLING

The crop is harvested and cooled within 2 hours to maintain quality

## GROWING

We hand weed each bed just prior to harvest.

We cover the crop with mesh to protect from rain and pests.

## HARVESTING
