Farmland bird food

Farmland birds require high quality food and regular feeds to ensure they remain healthy for business. You can purchase seed blends designed specifically for farmers and landowners to meet the hungry gap for farmland birds.

Below is just a selection;

Classic premium mixture, blended specifically with small farmland and garden birds in mind. Contains a wonderful selection of the finest seeds and is suitable for all year round feeding.

Contains Black sunflower (48%), white millet, red millet, plain canary seed, pinhead oats, peanut granules, safflower, hemp seed and rape seed oil. Contains no wheat.

Contains the finest seeds and is suitable for all year round feeding. With black sunflower being replaced with sunflower hearts.

Contains Sunflower hearts (44%), white millet, red millet, plain canary seed, pinhead oats, peanut granules, safflower, hemp seed and rape seed oil. Contains no wheat.

Contains Black sunflower (21%), white millet, red millet, red dari, plain canary seed, niger seed, pinhead oats, kibbled maize, peanut granules and rape seed oil. Does not contain wheat.

The importance of high energy seed mix

High energy seed mix is a very versatile seed mixture which is not only designed to feed birds all year round but also to appeal to them in the winter months, especially when weather patterns are unfavourable to wild life and farmlands are bare.

Due to the wide range of seeds included in most seed mixes, this makes it a good attractive meal for attracting many species of wild birds.

The 'Hungry Gap'

This is the period of the year, through the winter months, where most of the seed-bearing crops are in short supply. To be more specific on the definition, scientists at the British Trust for Ornithology (BTO) have found that some birds like [Yellowhammers](#) and [Reed Bunting](#) and many others are already at risk of disappearing from the countryside because they are going hungry between 14th February and the start of nesting in April because most of the 'seed-bearing' crop fields are usually ploughed up at this time of the year under the Environmental Stewardship rules.

High energy mix

Specifically blended to meet the 'hungry gap' when natural feeds are scarce. Ideal for all year round feeding .

Contains Sunflower hearts (25%), white millet, red millet, red dari, plain canary seed, niger seed, pinhead oats, kibbled maize, peanut granules and rape seed oil. Does not contain wheat

What makes a seed mix a great all-year-round bird food for wild birds?

Superior high energy mixture is made with the highest quality blend of seeds and a wide variety of seed mix, which makes this a very attractive meal for a wide range of wild birds.

Like some premium high energy seed mix, this higher-grade seed mix it's also not only designed to feed wild birds throughout the year but also appeal through the cold bare months of the winter.

Did you know?

Studies have shown that birds that have access to bird seeds from humans in the winter, are vastly more likely to survive the winter than those without access to bird seeds from humans.

White millet seed.

Rich in oil and protein, and should be used in small amounts alongside or added to other mixtures, and plain seeds.

Red millet seed

Rich in oil and protein, and should be used in small amounts alongside or added to other mixtures, and plain seeds

Nyger Seeds (or Thistle Seeds) are high in healthy oils, proteins and fibre, making them an ideal seed for a variety of birds, particularly in the winter when birds need to pile on the pounds to help them through the cold nights

The soft husks around Nyger Seeds makes them easy to crack through so soft billed birds like Goldfinches, Greenfinches and Thrushes will appreciate a peck at these seeds.

Suet Treats

You can purchase a great selection of Suet Treats for your garden birds. You can purchase suet pellets, suet rolls, suet blocks/cakes, suet balls and filled coconut shells. They're popular with a large variety of garden birds and offer high levels of proteins, minerals and natural, healthy oils.

Mealworms

You can also get finest quality dried mealworms perfect for all kinds of garden wildlife, including the birds, of course!

Dried mealworms are a fantastic source of energy and protein for insectivorous wild birds such as Robins, Wrens, Tits, Blackbirds and Song Thrushes. None of these popular visitors to your garden will be able to resist a bowl of mealworms

Mealworms are the larvae of the Yellow Mealworm Beetle - the adult beetles are shiny dark-brown or black - their larvae are honey-yellow. Dried mealworms retain all this protein and fat but without the wriggle

This list is not exhaustive !
